DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1: Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by USPN 4,870,493

Izawa et al

2: As for Claim 1, Izawa et al teaches on Column 1, Lines 35-59 and on Column 2, Lines 25-40 and on Column 9, Lines 14-45 and depicts in Figure 1 A solid-state image pickup apparatus for converting light incident from an object field to an electric picked-up signal and processing the electric picked-up signal to produce an image signal, comprising: a solid-state image sensor comprising an array of photosensitive cells bi-dimensionally arranged (PD) and converting the light to signal charges in accordance with an optical sensitivity, vertical transfer paths (VSRE) for vertically transferring the signal charges read out from said array of photosensitive cells (PD), and a horizontal transfer path (HSR) extending perpendicularly to said vertical transfer paths and responsive to a horizontal transfer signal (H1 and H2) for transferring the signal charges received from the vertical transfer path (VSRE) signal horizontal direction to thereby output the signal charges as the picked-up signal; a selecting circuit for selecting one of a plurality of optical sensitivities (Figure 2) which are different from each other Column 1, Lines 35-59); a system controller (Figure 2) for generating a control signal in accordance with the sensitivity selected; and a timing generator (driver CKT) for generating a timing signal for

transferring the signal charges for said solid-state image sensor in accordance with the control signal; said timing generator lowering, in accordance with the sensitivity selected, a frequency of the horizontal transfer signal below a usual frequency for use in transferring the signal charges in the horizontal direction.

Allowable Subject Matter

6: Claims 2-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
